

## Saliva Test for the Presence Of Alcohol in the Blood

### *AlcoScreen Saliva Alcohol Test*

### *Fast, Easy Screening Test for the Detection of Alcohol*

Alco-Screen® is a rapid, highly sensitive method to detect the presence of alcohol in saliva and provide an approximation of relative blood alcohol concentration. Since it is well established that the concentration of alcohol in saliva is very close to that in the blood, saliva is the preferred specimen for alcohol testing, allowing for greater detection sensitivity than breath testing methods. Alco-Screen® is a very simple, one -step, 2 minute test requiring no instrumentation, calibration or special training to be used effectively, and is convenient enough to be used any time, any place. Inappropriate consumption of alcohol can be a problem in many family, occupational, institutional and safety sensitive situations. Alco -Screen® provides you with an easy yet effective tool in identifying alcohol consumption. And it is the most cost effective alcohol testing method available. For \$1.50 per test, Alco-Screen® can help you avoid the risks associated with inappropriate alcohol consumption.

### Summary:

- \* 1 Box of 24 Tests
- \* Results in just 2 minutes
- \* The relationship between the amount of saliva alcohol and blood is 1:1
- \* Test any time /any place
- \* Greatly reduces the time and cost associated with other testing methods
- \* Test from .02% - .30% BAC
- \* Completely Disposable
